

You Can't Take the Slow Lane to Success

Your sluggish network is costing you time and money. Your team can't deliver the best service if they have to continually wait or refresh to download data or pull up their email. If you've layered new technology like high-speed Wi-Fi or cloud services over failing hardware and servers, you'll still have plenty of productivity hiccups. A fully optimized infrastructure is the best way to guarantee maximum uptime and performance.

Take the following quiz to determine if it's time to get expert advice.

Is your server more than five years old?

Yes ☐ No ☐

Do you need more efficient access to your data?

Yes ☐ No ☐

Are you unsure about your security and regulatory compliance status?

Yes ☐ No ☐

Has your server gone down more than once in the last six months?

Yes ☐ No ☐

Are you unsure if your firewall is up to date and patched with the latest software?

Yes ☐ No ☐

Have you added 3 or more users to the same server?

Yes ☐ No ☐

Has it been more than three years since someone has assessed your cabling structure?

Yes ☐ No ☐

Does your Wi-Fi speed seem to be slower with each passing month?

Yes ☐ No ☐

Is your team having trouble completing deadlines on time due to failing technology?

Yes ☐ No ☐

If you answered yes to one or more of these questions, it's time to get a technology assessment to see where we can improve uptime and connection speeds.

Fortunately, our current partnership enables you to update your existing managed services so you can get the latest technology, plus the monitoring and maintenance you need to keep things running smoothly.

Let's talk about how to get your network up to speed. Contact us today.
