

How **Cybersecurity** Practices Have **Evolved**

Sixty-six million years ago, dinosaurs didn't adapt, and they didn't survive.

Cyberthreats are today's digital meteors threatening businesses with security practices stuck in the past. Discover what's extinct, what's evolved and what you need to thrive.

Extinct

- ✗ Relying on passwords alone
- ✗ Antivirus-only defense
- ✗ Spam filters
- ✗ Backups stored locally
- ✗ Annual security training
- ✗ Security as an IT-only responsibility

Evolved

- ✚ Using multi-factor authentication
- ✚ Layered security
- ✚ AI-powered phishing detection
- ✚ Immutable cloud-based backups
- ✚ Ongoing, bite-sized training and simulations
- ✚ Shared responsibility across all departments

Don't risk extinction.

Contact us to evaluate your security today and evolve before threats wreak havoc.
